Chocolat is a 1998 French drama film directed by Jacques, starring Juliette Binoche, Daniel Auteuil, and Sarah Michelle Gellar. The film was an international hit and winner of the César award for Best Foreign Film in 1999. This is a professionally translated text.. Movies, Comics and Games. The Comics Database - Chocolat.New insights into the effects of long-term exposure of marine organisms to microplastics. Marine litter accumulates in the oceans, but its concentrations are still increasing over time. Microplastics are small, colloidal particles that range in size from less than 1  $\mu\text{m}$  to several thousand micrometres, originating from the degradation of plastic products used in daily life. There is increasing evidence that microplastics are

---

harmful to marine organisms, and their presence has been shown to have adverse effects on important species such as fish, turtles, sea otters and birds. Moreover, microplastics may also be translocated over long distances from their source areas. Here, we review the effects of microplastics on marine life at the cellular, organismal and population levels. We discuss the potential adverse effects of microplastics on other biological systems including the impacts of these contaminants on terrestrial wildlife. We also look at the potential for marine microplastics to be ingested by other marine species, as well as the potential impacts of these particles on other species, including humans, through human-mediated pathways. Finally, we present recommendations and perspectives on how to improve our understanding of microplastic effects in marine ecosystems.

Q: How can I recursively validate an object in javascript? I have a json object that I'd like to validate. The object has several keys that must be present, but can be nested, eg: { "name" : "FirstName", "age" : 21, "children" : [ { "name" : "FirstChildName", "age" : 10 }, { "name" : "SecondChildName", "age" : 8 } ] } What I'd like to do is to validate that all of the keys that must be there are there, and that each of the children are valid. The keys themselves may have validation as well. I know how to do this in a loop, but is there a way to do it in a recursive fashion? A: 82157476af
